

4010 Series Curtain Track

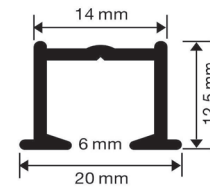

Product Information

The Verosol **4010 Series track** is an integrated tracking system that is flush mounted to your ceiling. Suitable for early stages of design documentation or retro-fit to lined ceiling spaces for a seamless finish.

Selecting the right curtains requires pairing two elements: drape and track. When selecting Curtains, you will need to consider the functionality and combination of fabrics including the header types and tracks for the space.

Drape selection should take into consideration the heading style of the curtain and finished look. Track selection will depend on installation requirement and drape fullness. Various fabrics and track combinations can provide thermal, acoustic and ambience to any room.

Our team of curtain and blind experts are available to assist you in making the right choice for your needs.
